Project 1: Personal Portfolio Website

Introduction: The primary objective of this project was to develop a professional digital presence that showcases my technical skills, academic background, and completed projects. I focused on creating a modern, clean, and responsive design to ensure a seamless user experience across all devices. This portfolio serves as a comprehensive reflection of my growth as a Frontend Developer.

Key Features:

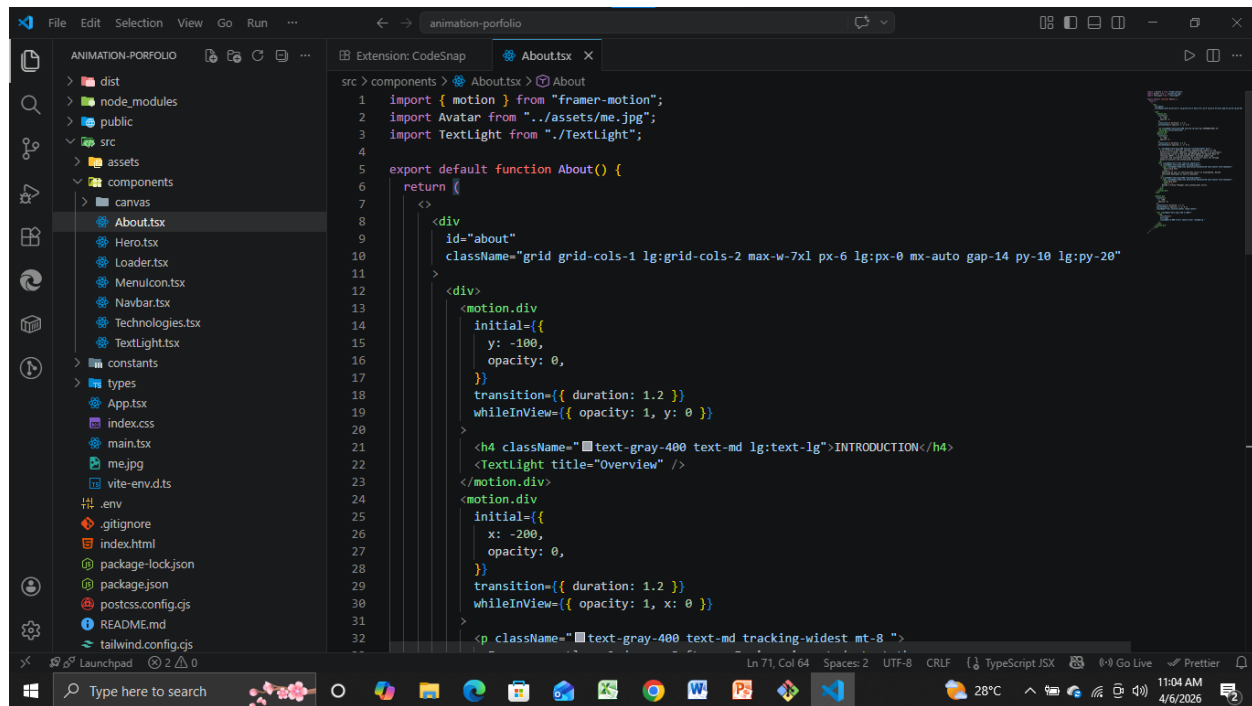

- **Responsive Layout:** Optimized for mobile, tablet, and desktop screens using CSS Media Queries.
- **Interactive UI:** Included smooth scrolling, hover effects, and a dynamic project gallery.
- **Technical Sections:** Dedicated areas for Skills, About Me, and a functional Contact section.

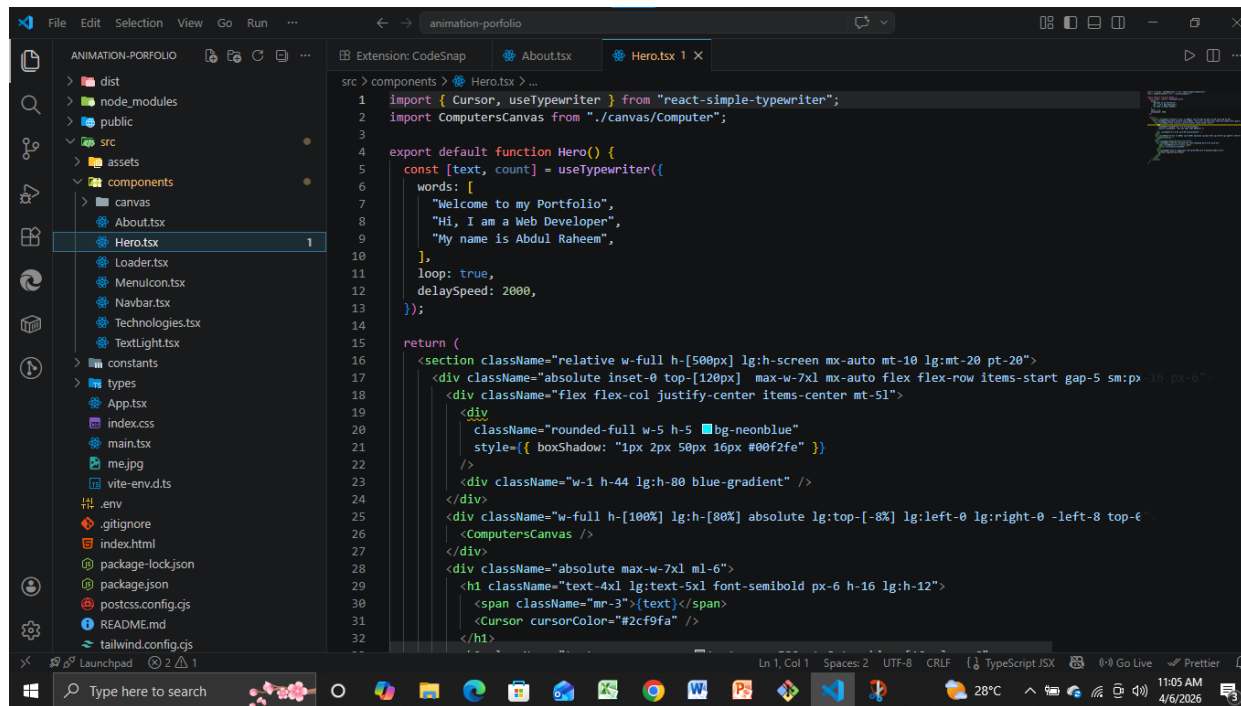

Tech Stack:

- HTML5, CSS3, and React.

Project 2: Interactive To-Do List Application

Introduction: This project involved building a functional task management application designed to help users organize their daily activities. The main focus was on implementing core programming logic, specifically CRUD (Create, Read, Update, Delete) operations, and ensuring efficient data handling.

Key Features:

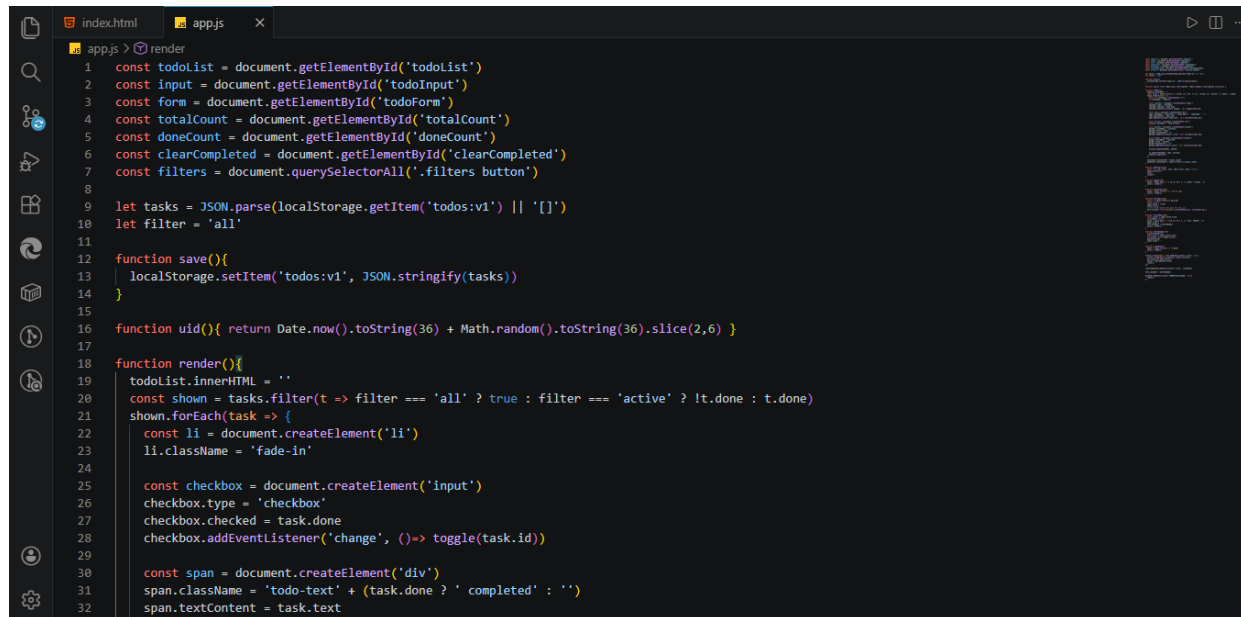

- **Task Management:** Users can add, edit, and remove tasks in real-time.
- **State Persistence:** Integrated Local Storage to ensure that tasks remain saved even after refreshing the browser.
- **Status Tracking:** Features a "Mark as Complete" toggle to help users track their progress visually.

Tech Stack:

- HTML, CSS, and Javascript.

```
index.html  app.js  x
app.js > render
1  const todoList = document.getElementById('todoList')
2  const input = document.getElementById('todoInput')
3  const form = document.getElementById('todoForm')
4  const totalCount = document.getElementById('totalCount')
5  const doneCount = document.getElementById('doneCount')
6  const clearCompleted = document.getElementById('clearCompleted')
7  const filters = document.querySelectorAll('.filters button')
8
9  let tasks = JSON.parse(localStorage.getItem('todos:v1') || '[]')
10 let filter = 'all'
11
12 function save(){
13   localStorage.setItem('todos:v1', JSON.stringify(tasks))
14 }
15
16 function uid(){ return Date.now().toString(36) + Math.random().toString(36).slice(2,6) }
17
18 function render(){
19   todoList.innerHTML = ''
20   const shown = tasks.filter(t => filter === 'all' ? true : filter === 'active' ? !t.done : t.done)
21   shown.forEach(task => {
22     const li = document.createElement('li')
23     li.className = 'fade-in'
24
25     const checkbox = document.createElement('input')
26     checkbox.type = 'checkbox'
27     checkbox.checked = task.done
28     checkbox.addEventListener('change', () => toggle(task.id))
29
30     const span = document.createElement('div')
31     span.className = 'todo-text' + (task.done ? ' completed' : '')
32     span.textContent = task.text
33   })
34 }
```

```
index.html  appjs  x
appjs > render
18 function render(){
21   shown.forEach(task => {
33     span.addEventListener('dblclick', ()=> startEdit(task.id))
34
35     const actions = document.createElement('div')
36     actions.className = 'item-actions'
37
38     const editBtn = document.createElement('button')
39     editBtn.className = 'icon-btn'
40     editBtn.title = 'Edit'
41     editBtn.textContent = '\u2702'
42     editBtn.addEventListener('click', ()=> startEdit(task.id))
43
44     const delBtn = document.createElement('button')
45     delBtn.className = 'icon-btn'
46     delBtn.title = 'Delete'
47     delBtn.textContent = '\u2715'
48     delBtn.addEventListener('click', ()=> removeTask(task.id))
49
50     actions.append(editBtn, delBtn)
51
52     li.append(checkbox, span, actions)
53     todoList.append(li)
54   })
55
56   totalCount.textContent = tasks.length
57   doneCount.textContent = tasks.filter(t=>t.done).length
58 }
59
60 function addTask(text){
61   const t = { id: uid(), text: text.trim(), done: false }
62   tasks.unshift(t)
```
